

Trading Rule: Two Moving Averages

Contents

1	Rule Description	2
2	Rule Parameters	2
3	Equation	2
4	Glossary	2

1 Rule Description

This price-only rule takes positions based on two moving averages, and a minimum threshold K. It allocates a positive position when the shorter moving average is above K fraction higher than the other average and vice versa.

2 Rule Parameters

Below is a table summarizing the parameters specific to this trading rule.

Parameter Name	Default Value	Description	Symbol
Minimum ratio	0.01	Threshold difference in averages.	K
Short price average length	2	Number of days to include in the fast moving average.	L_1
Long price average length	2	Number of extra days to include in slow moving average.	L_2
Maximum allocation	1.0	Maximum size of position to take.	Z_{max}

3 Equation

$$\Lambda(t, L_1, p) = \frac{1}{L_1} \sum_{n=0}^{L_1 - 1} p(t - n)$$
(1)

$$\Lambda(t, L_2, p) = \frac{1}{L_2} \sum_{n=0}^{L_2 - 1} p(t - n)$$
 (2)

$$\Lambda_t = \frac{\Lambda(t, L_1, p)}{\Lambda(t, L_2, p)} \tag{3}$$

$$z_{t} = \begin{cases} Z_{max}, & \text{if } \Lambda_{t} > 1 + 2K \\ \frac{\Lambda_{t} - 1 - K}{K}, & \text{if } 1 + K < \Lambda_{t} < 1 + 2K \\ 0.0, & \text{if } 1/(1 + K) < \Lambda_{t} < 1 + K \\ -\frac{1/\Lambda_{t} - 1 - K}{K}, & \text{if } 1/(1 + 2K) < \Lambda_{t} < 1/(1 + K) \\ -Z_{max}, & \text{if } \Lambda_{t} < 1/(1 + 2K) \end{cases}$$

$$(4)$$

where z_t is the portfolio allocation at time t, and p = p(t) is the value of the price series.

4 Glossary

- Bullish: Positive outlook on the market. Expectation of positive returns.
- Bearish: Negative outlook on the market, Expectation of negative returns.
- **Allocation:** The allocation is the fractional amount of the portfolios value used to determine the size of the trading position.

- Parameter: Value used by the trading rule in the calculation for trading position
- Trading Rule: Strategy to determine when to buy, hold or sell a position.
